FRAGILE EARTH  
Session T8E  
Munich, 05.09.2011

# Agenda

- **Theoretical Background: Artificial Intelligence / Artificial Neural Networks**
- **Short Presentation of Developed Software *advangeo®* and of the Developed Extension *advangeo® Erosion***
- **Description of Work Methodology:**
  - Case Study: Risk Analysis Glashütte Flood Control Reservoir Catchment Area
    - *Extensive Soil Erosion*
    - *Erosion Gullies*
    - *Soil Sliding / Creeping*
- **Further Case Studies**
- **Summary**
- **Information Sources: Booth / Webpage**

**FRAGILE EARTH**  
Session T8E  
Munich, 05.09.2011

# Motivation

*Where are the deposits located ?*

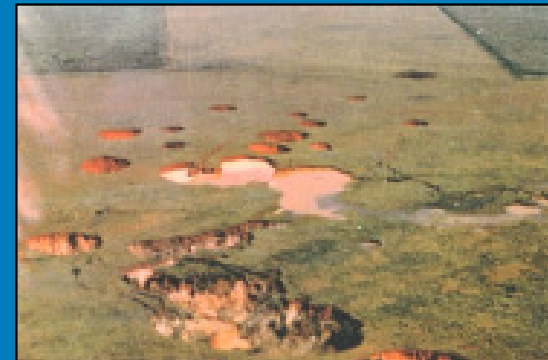

*Where do forest pests spread ?*

*Where does coal burn ?*

*Where are karst caves located ?*

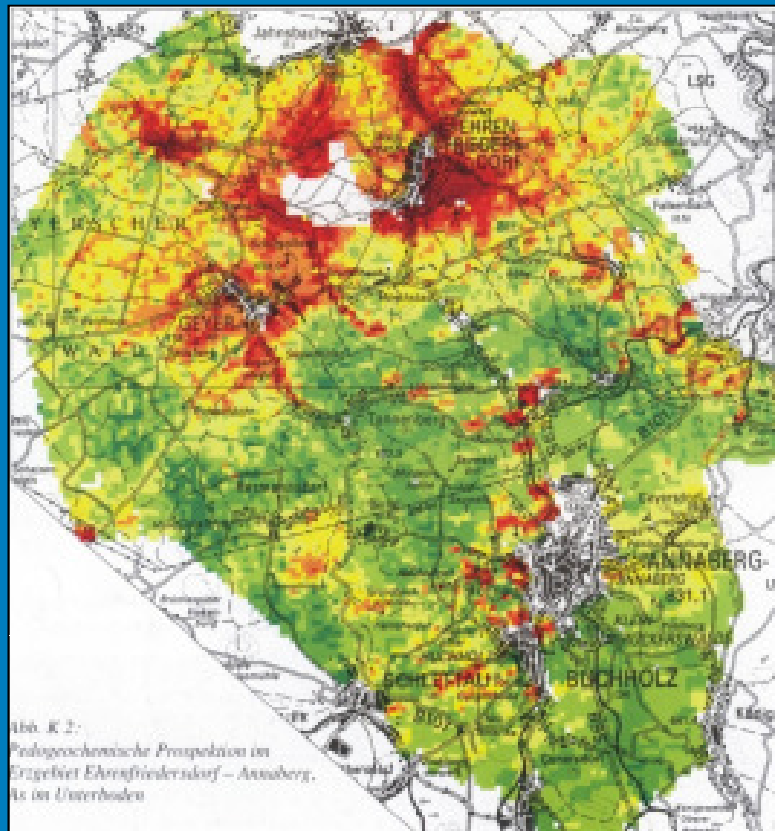

FRAGILE EARTH  
Session T8E  
Munich, 05.09.2011

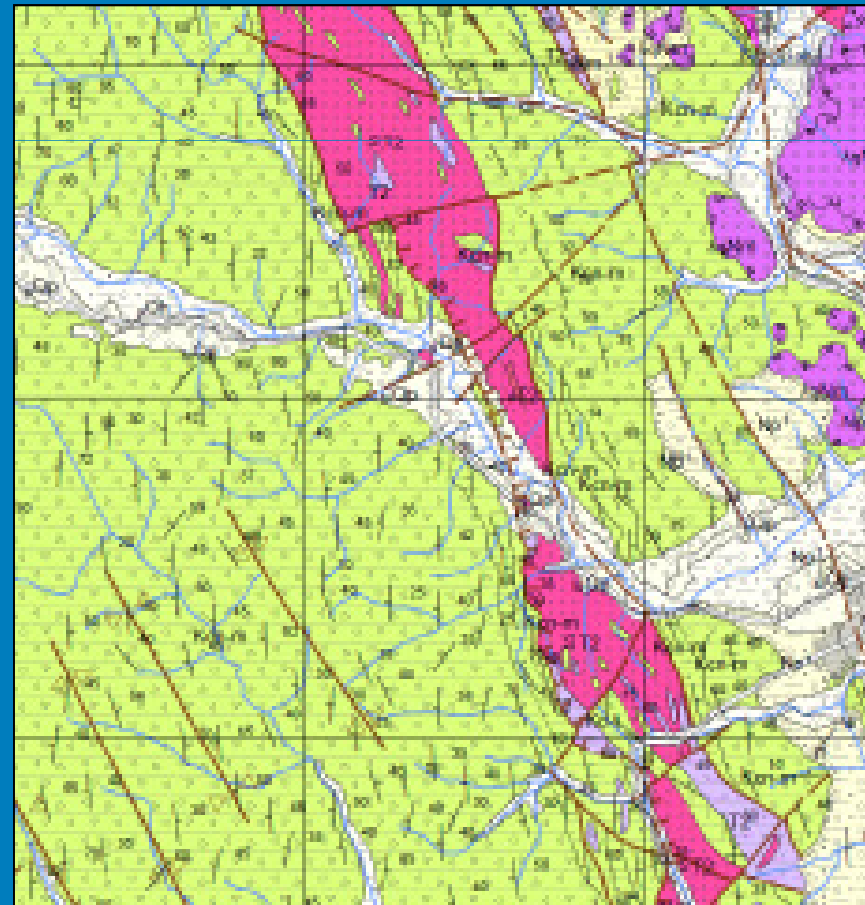

# Motivation

*Where is soil contaminated ?*

*Where is a geological / pedological boundary?*

FRAGILE EARTH  
Session T8E  
Munich, 05.09.2011

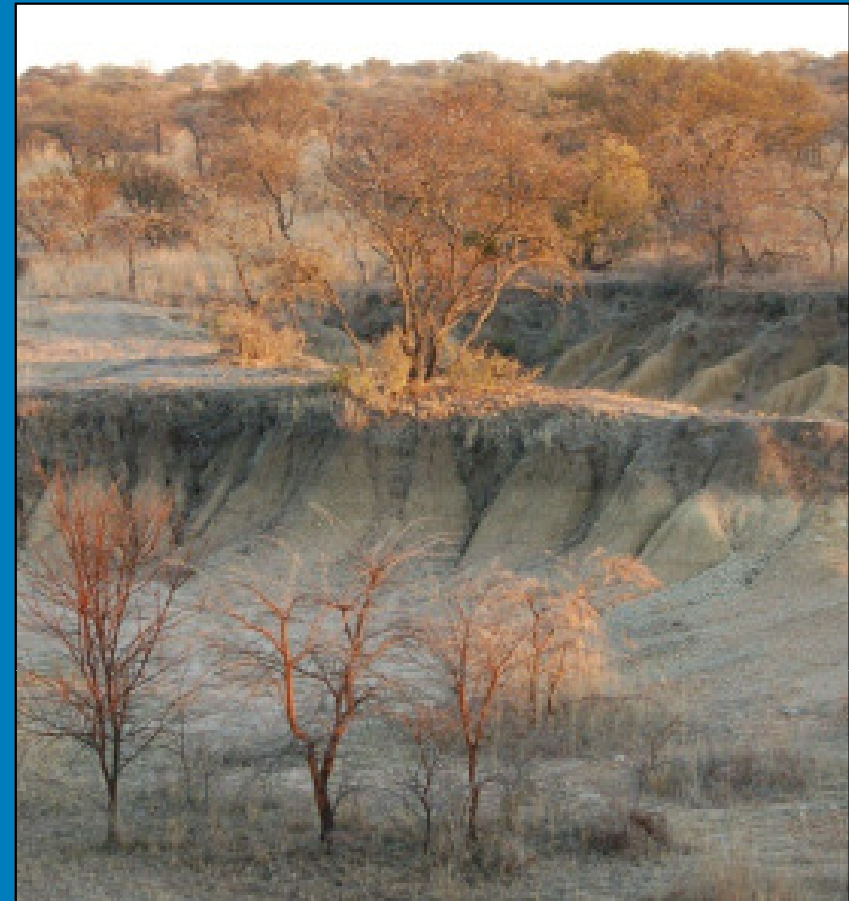

# Motivation

*Where do hillside slides occur?*

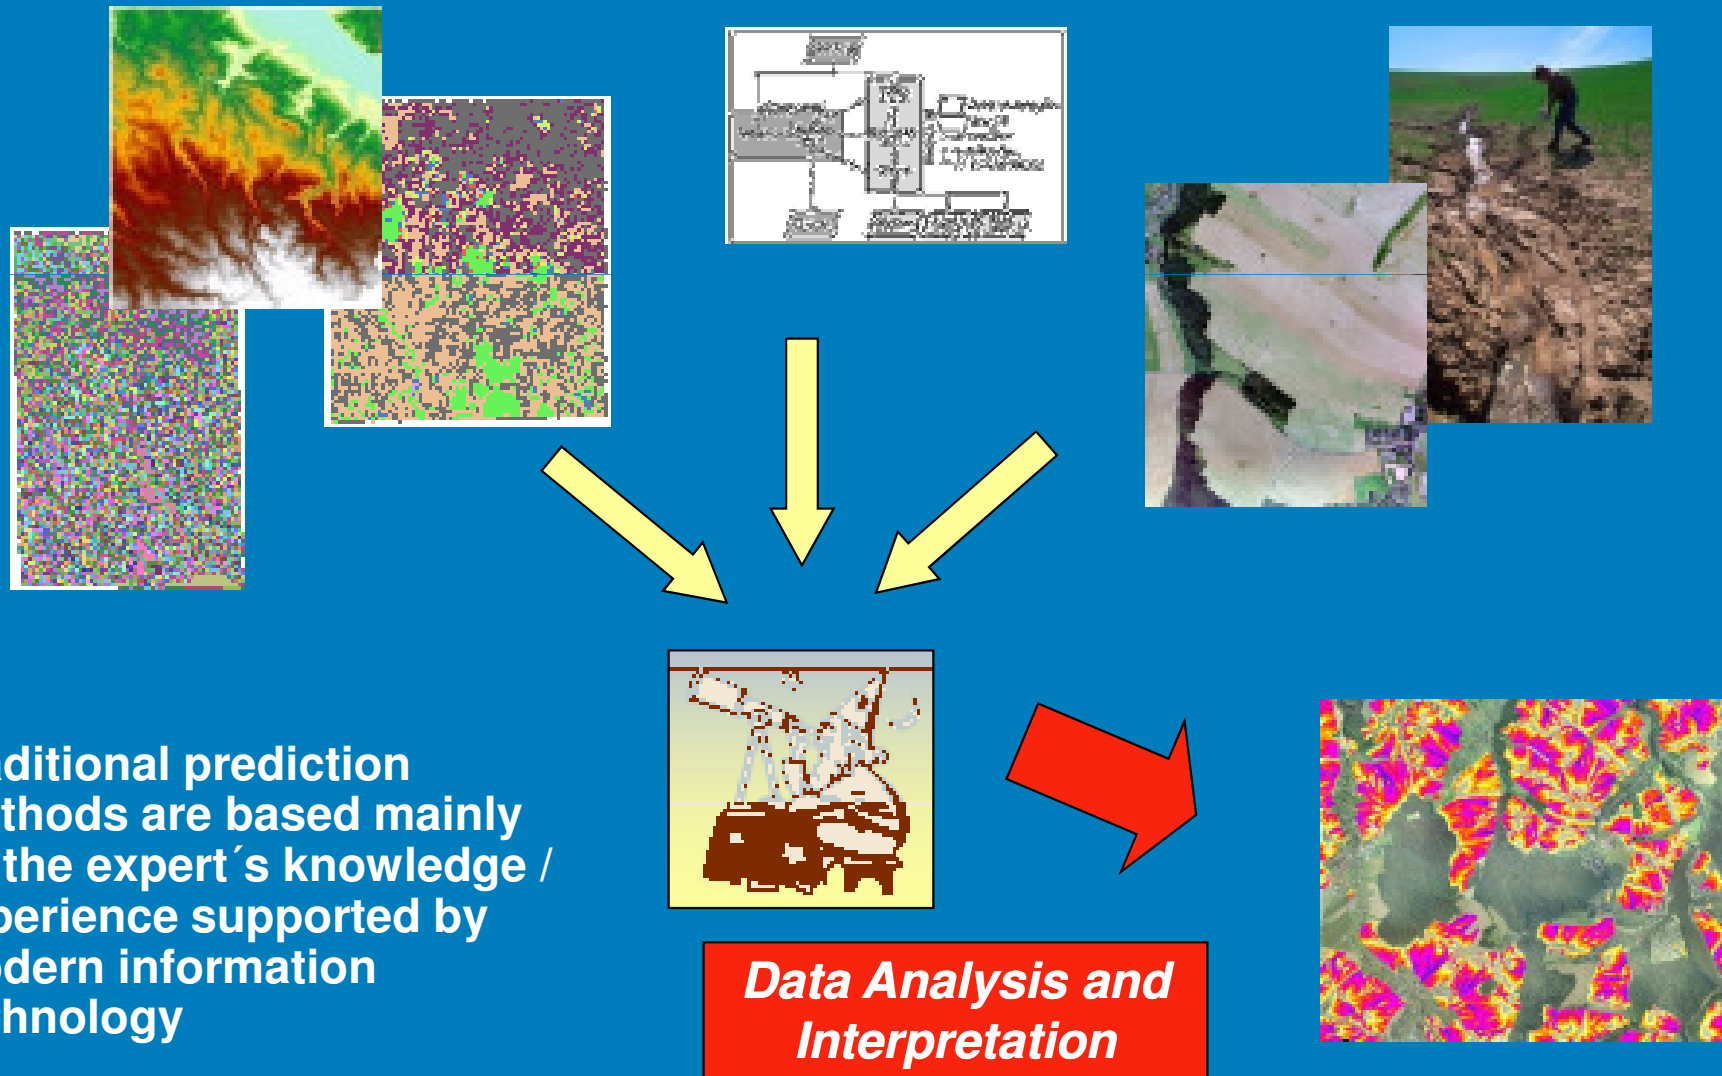

*Where do erosion gullies form?*

FRAGILE EARTH  
Session T8E  
Munich, 05.09.2011

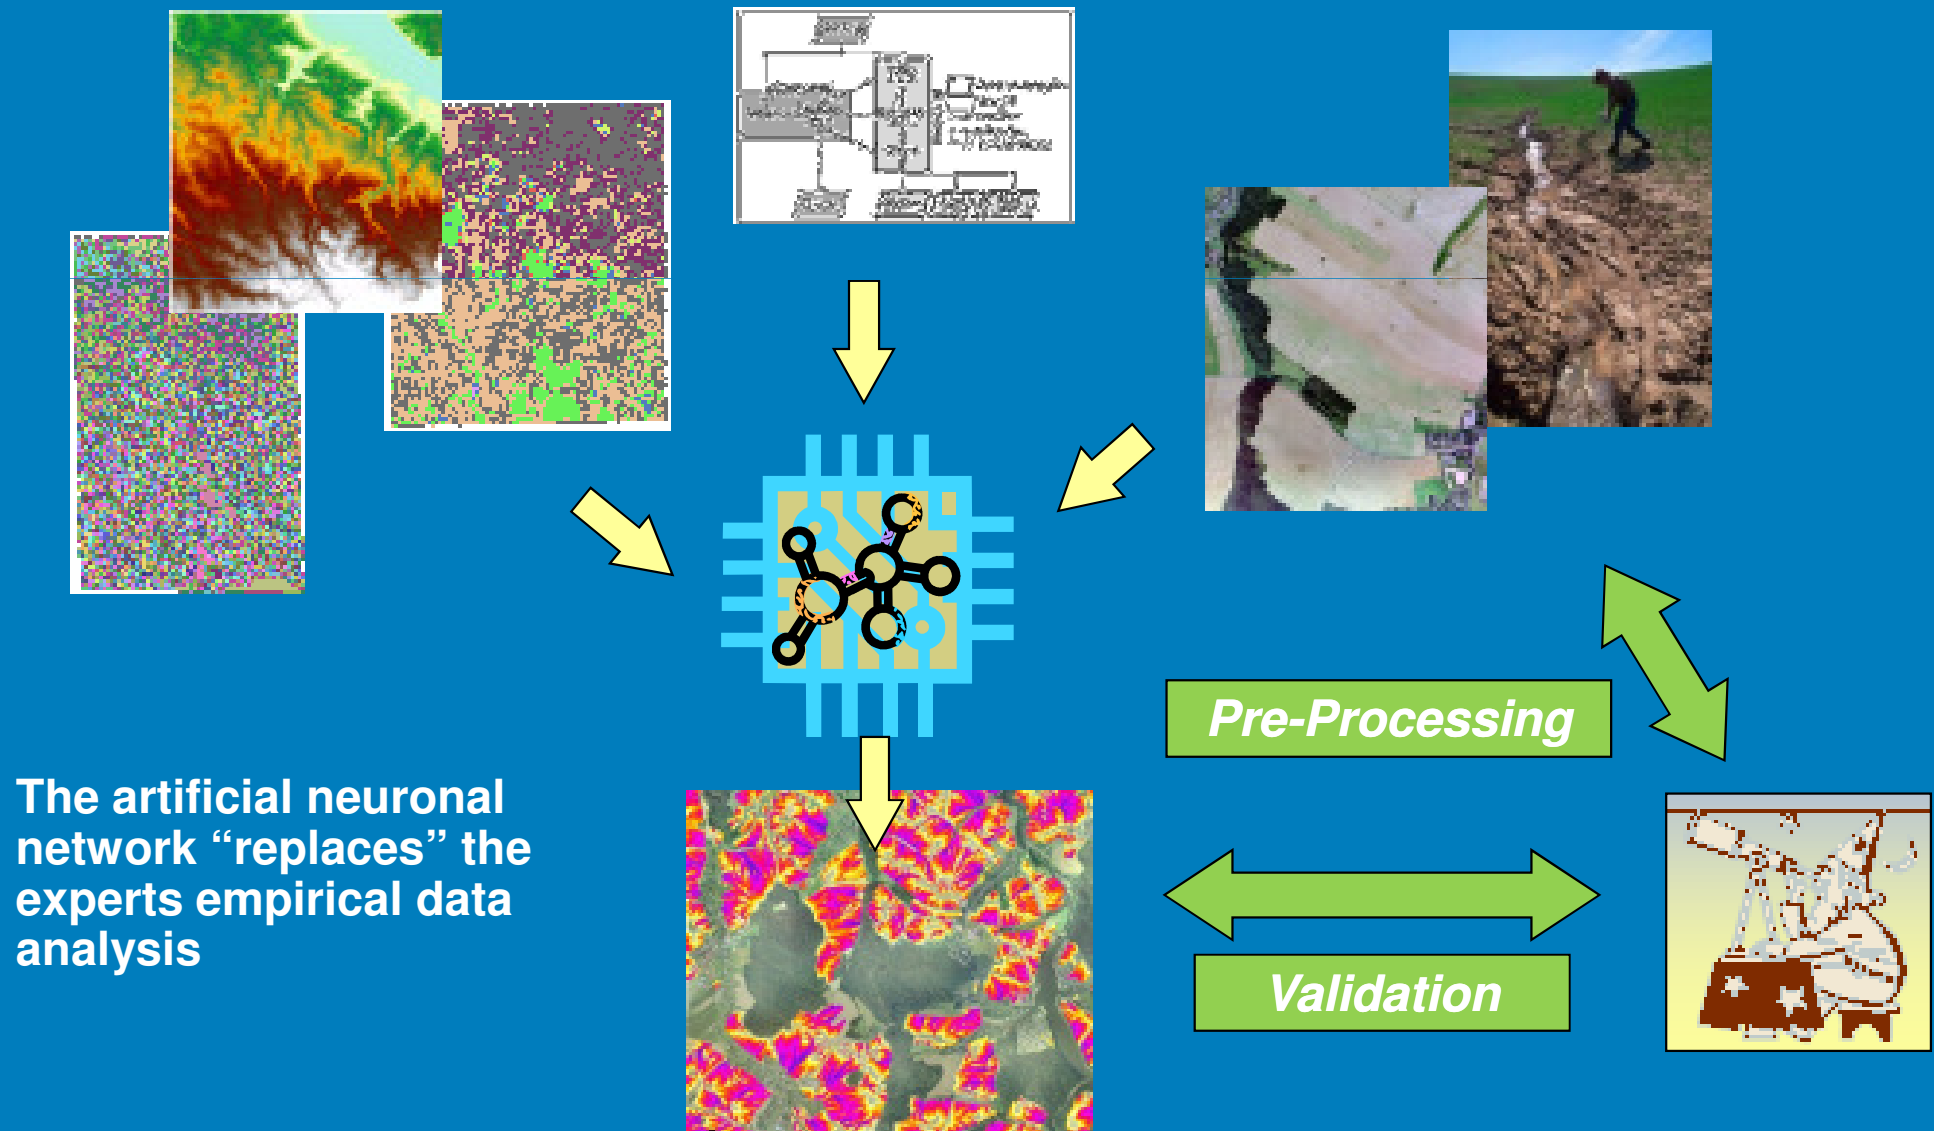

# Predictive Mapping: Traditional Approach

FRAGILE EARTH  
Session T8E  
Munich, 05.09.2011

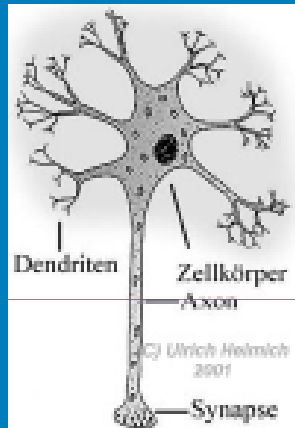

# Predictive Mapping: Modern Approach Using Artificial Intelligence

FRAGILE EARTH  
Session T8E  
Munich, 05.09.2011

# Definition: Artificial Neural Networks

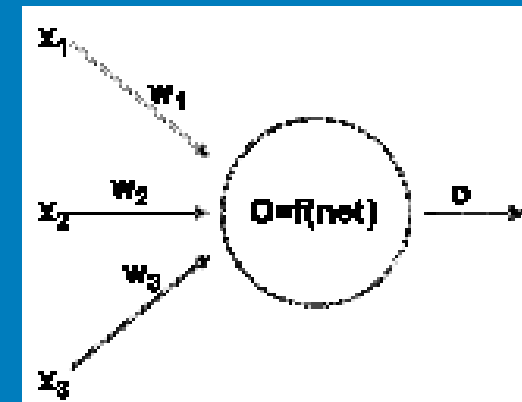

## Modell: Neuron Cell

- Functionality as a biological neural system
- Consists of artificial neuron cells
- Simulation of biological processes of neurons by use of suitable mathematical operations
- In most cases layer-like configuration of the neurons

## The Neuron Cell as a Processor

- **Connection between the neurons by weights  $w$** 
  - Enforce or reduce the level of the input information
  - Are directed, can be trained
- **Input signals**
  - Re-computed to a single input information: the propagation function
- **Output signals**
  - Activation function computes the output status of a neuron (often used: Sigmoid function)

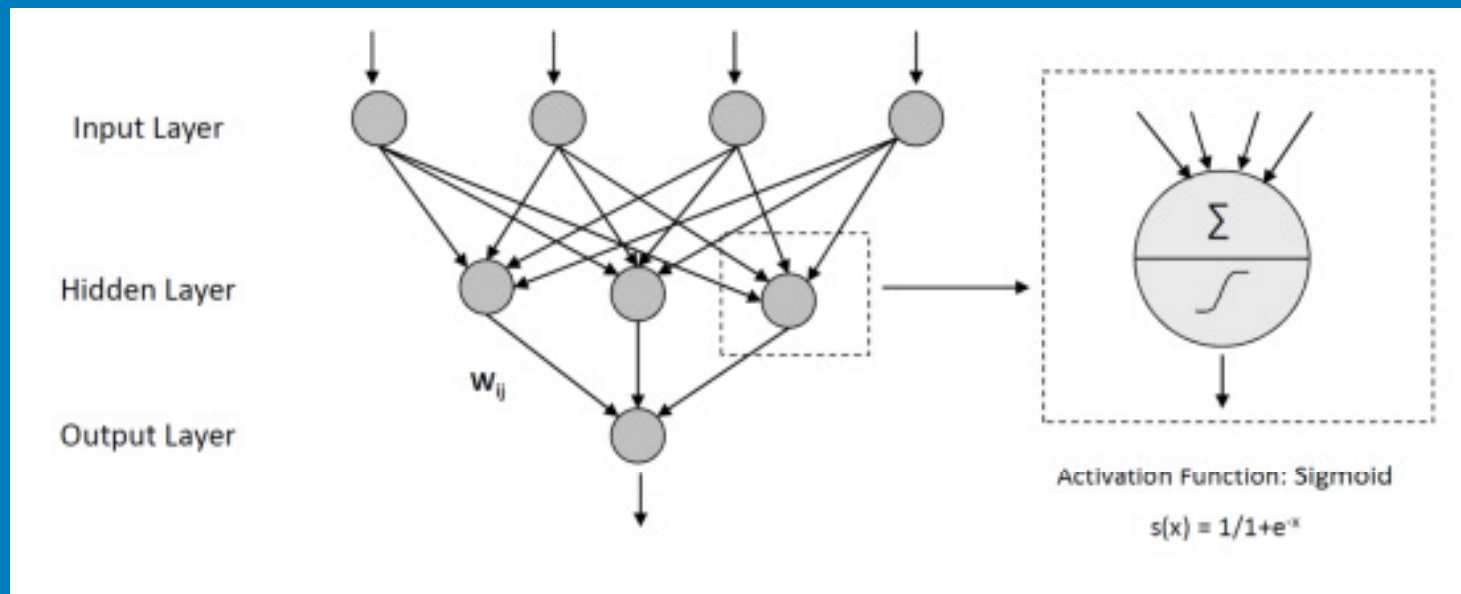

FRAGILE EARTH  
Session T8E  
Munich, 05.09.2011

# Principle Setup of Artificial Neural Networks

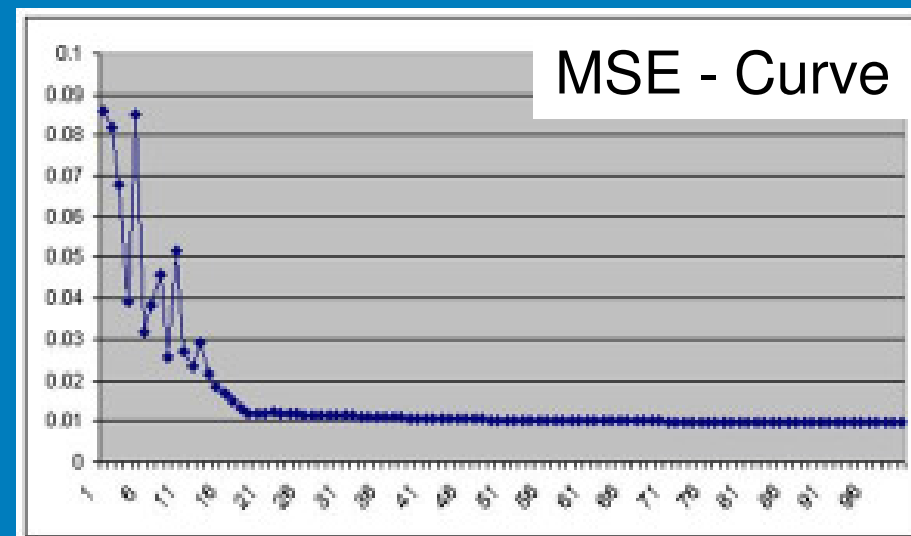

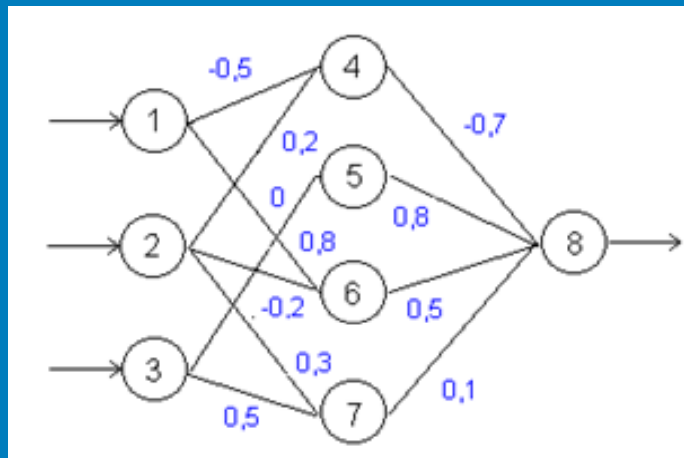

## Network Topology: MLP (Multi Layer Perceptron)

- Set-up of neurons in layers
- Direction and degree of connections
- Amount of hidden layers and neurons

## Learning Algorithm: Back-Propagation

- Repeated input of training data
- Modification of weights  $w$
- Reduces error between expected and actual output of the network

# Advantages / Disadvantages of Artificial Neural Networks

## Advantages:

- ***learnable***: learning from examples
- ***generalization***: able to solve similar problems that have not been trained yet
- ***universal***: prediction, classification, pattern recognition
- able to analyze complex, ***non-linear*** relationships
- ***fault-tolerant*** against noisy data (e.g. face recognition)
- ***quick***

## Additional characteristics:

- choice of ***topology*** and ***training algorithm***
- ***black box system***: evaluation of weight of parameters

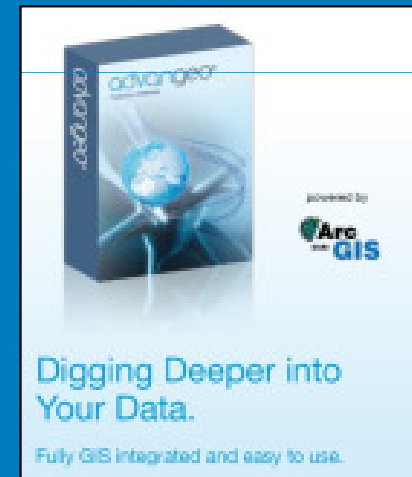

FRAGILE EARTH  
Session T8E  
Munich, 05.09.2011

- **Easy Access** to Methods of Artificial Intelligence for Spatial Prediction
- **Documentation** of Working Steps
- Capture and Management of **Metadata** for Geodata
- **Tools** for Data Pre-Processing, Post-Processing and Cartographic Presentation
- **Integration** into Standard ESRI ArcGIS-Software

## Available Knowledge and Input Data

**Knowledge:** Aerial Images, Field Observations

**Data:**  
DEM,  
Soil Map,  
Landuse,  
Geology

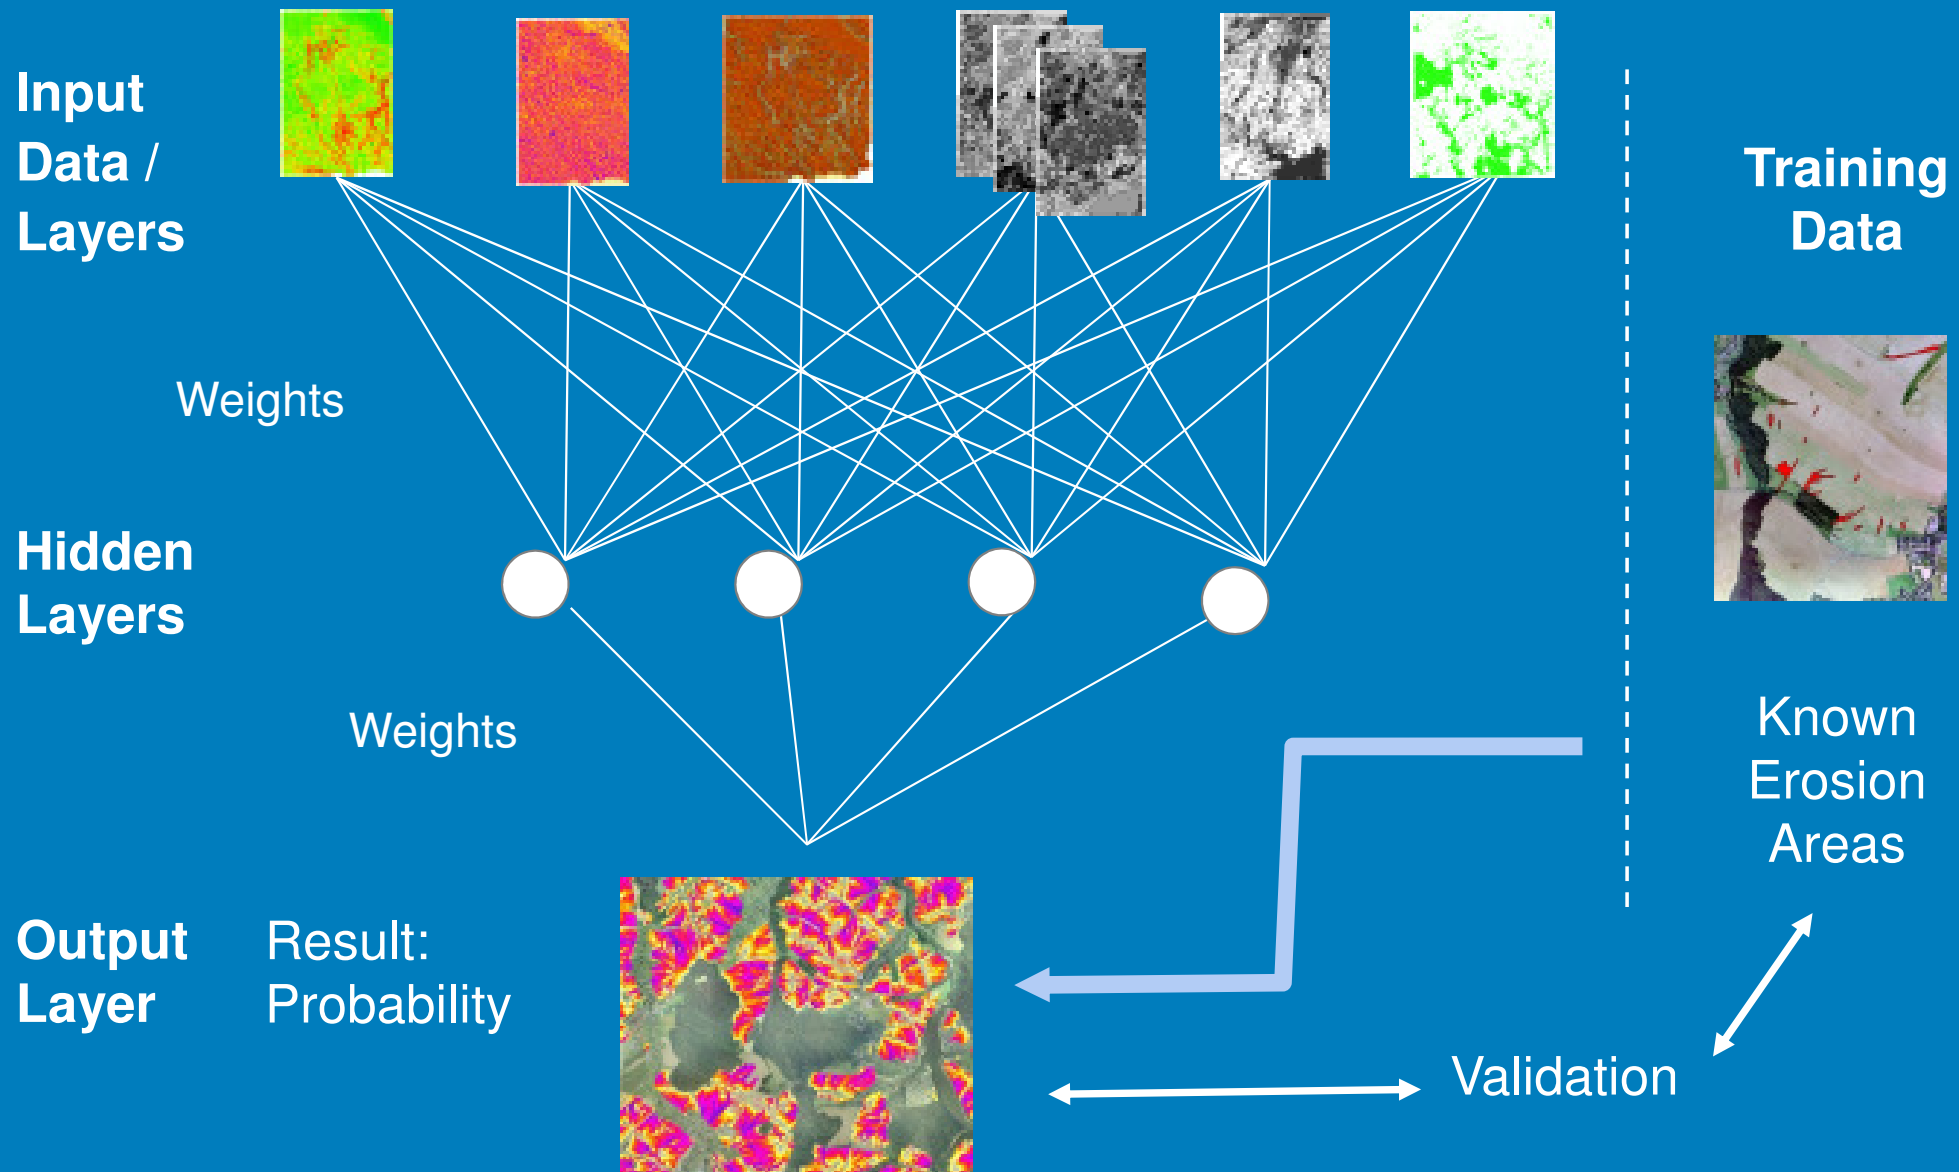

**Knowledge:** Analytical Models

FRAGILE EARTH  
Session T8E  
Munich, 05.09.2011

# Case Study: Glashütte Flood Control Reservoir Catchment Area

FRAGILE EARTH  
Session T8E  
Munich, 05.09.2011

# Probability Modelling Workflow 1: Extensive Soil Erosion

## Input Data

Elevation Model and its Derivates:

- *Slope*
- *Flow accumulation*

Soil:

- *Clay*
- *Silt*
- *Sand*
- *Fine skeleton*
- *Coarse skeleton*

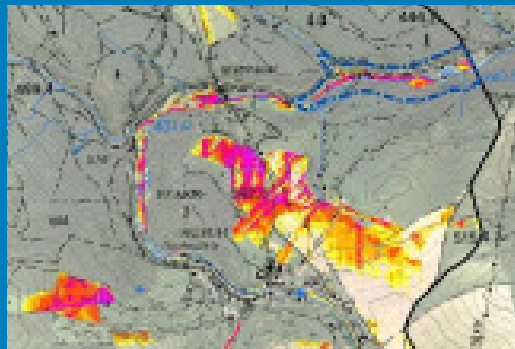

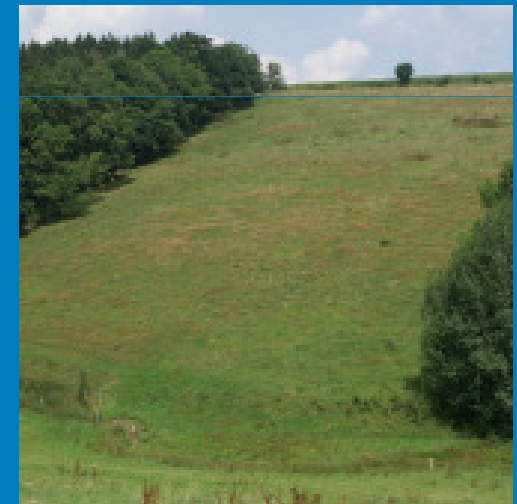

Landuse

- *Grassland*
- *Open area without vegetation*
- *Cropland*
- *Urban / industrial areas*

## Training Data

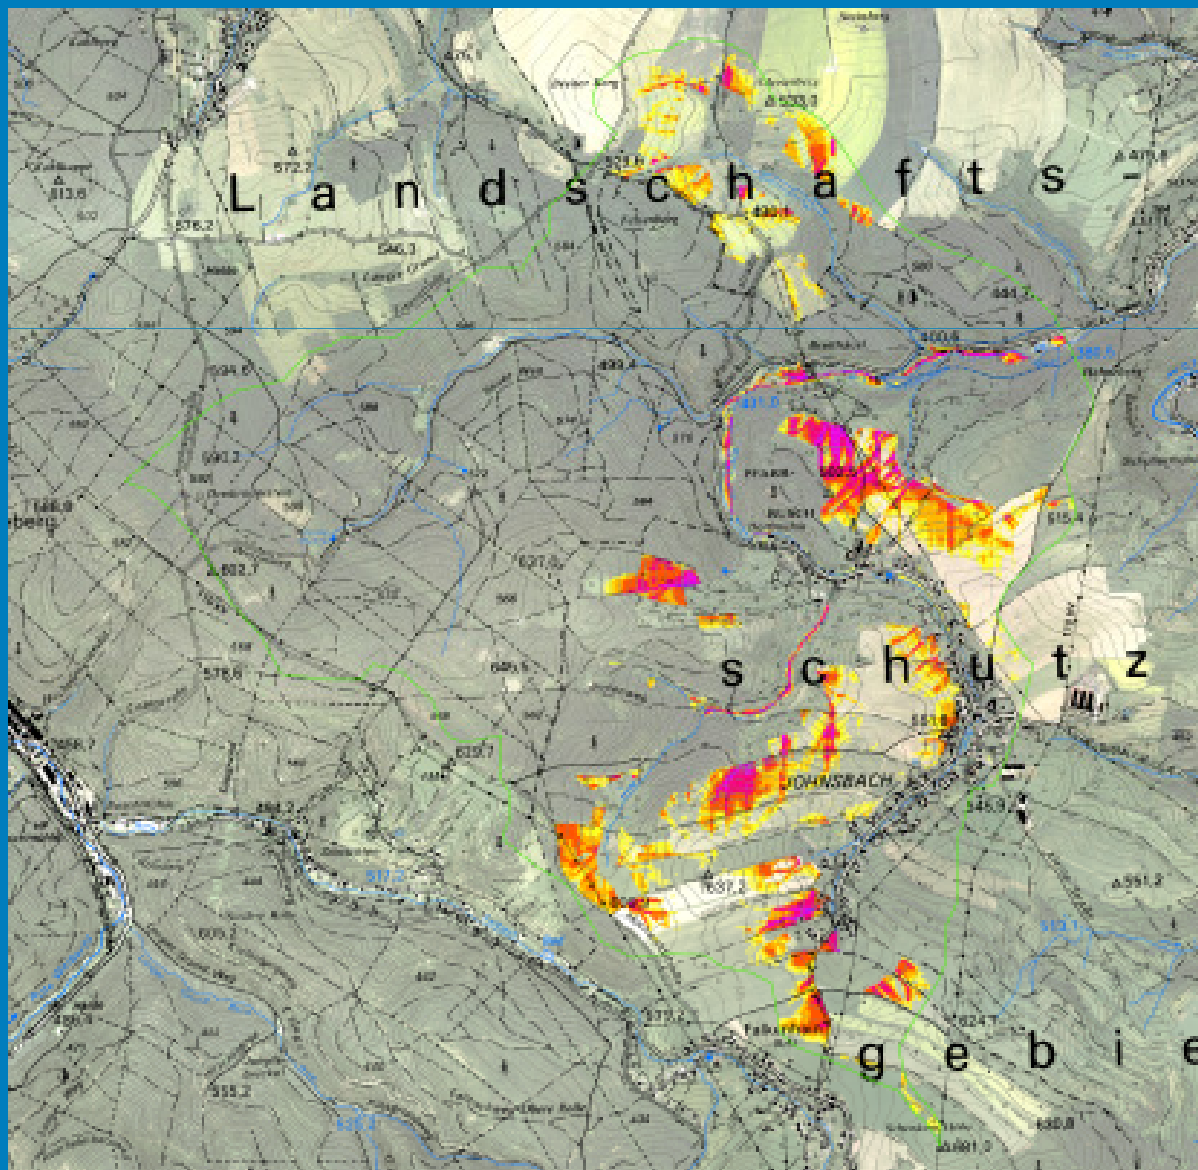

Known Areas with Extensive Soil Erosion

FRAGILE EARTH  
Session T8E  
Munich, 05.09.2011

# Probability Modelling Results 1: Extensive Soil Erosion

## Legende

### Arbeitsgebiet

Einzugsgebiet HRB Glashütte

### HRB Glashütte

Dammskronenwasserspiegel (geplant: 408,20m üNN)

### Gefährdung durch flächenhaften Bodenabtrag

#### Eintrittswahrscheinlichkeit

- < 55 %
- 55 - 60 %
- 60 - 65 %

## Case Study : Glashütte Flood Control Reservoir Catchment Area

## Delineation of Endangered Areas and Recommendation of Prevention Measures

## Bolder barriers against erosion gullies

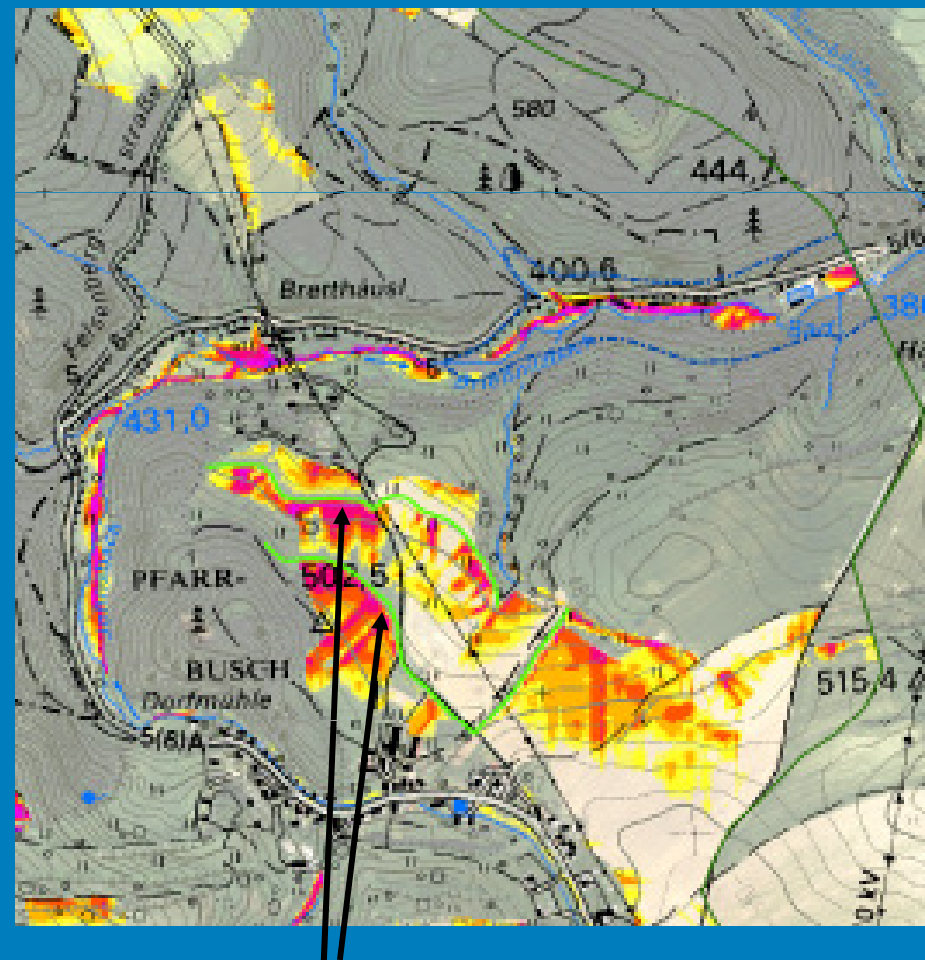

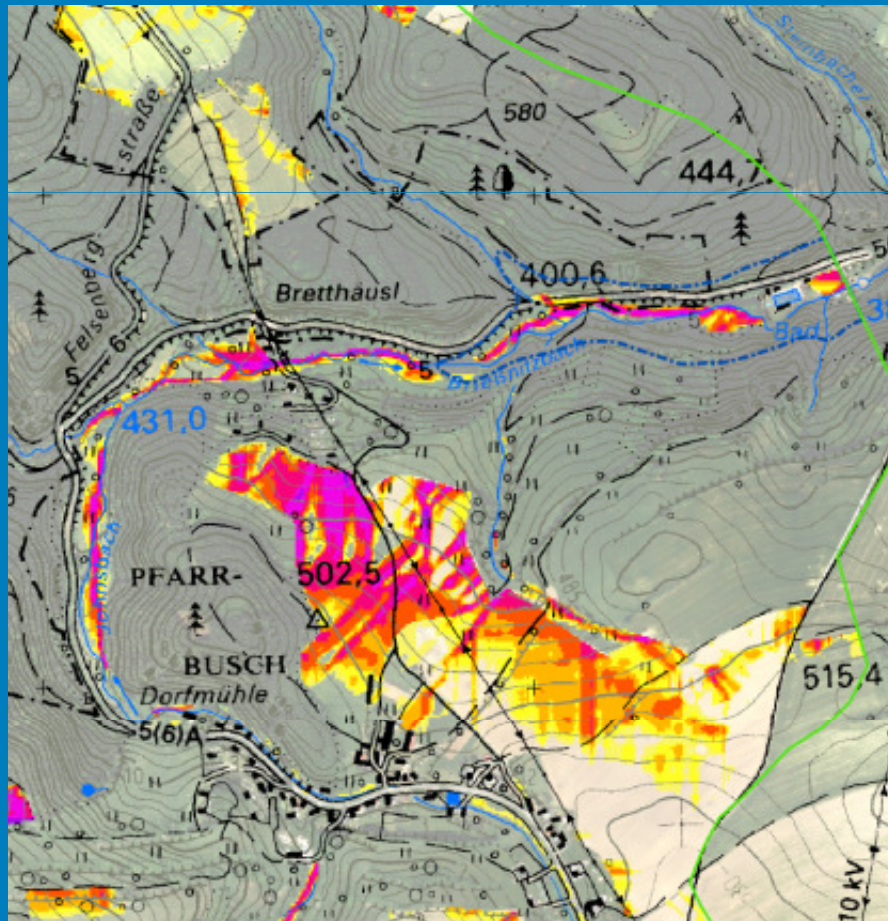

## Stone ridges against extensive soil erosion

**FRAGILE EARTH**  
**Session T8E**  
**Munich, 05.09.2011**

## Modeling of Recommended Prevention Measures

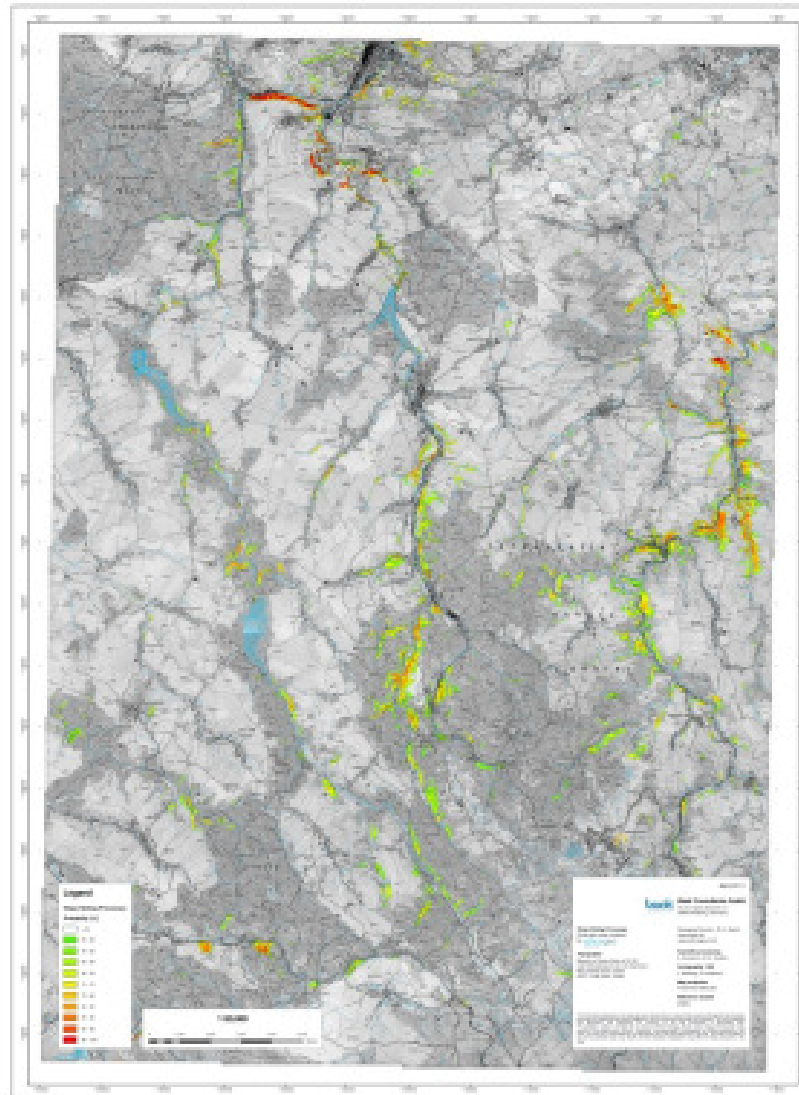

Stone ridges against extensive soil erosion

# Model Application: Weißeritz Catchment Area

Slope Vulnerability Analysis - Probability of Slope Sliding Processes  
Weißeritz Catchment Area  
Scale 1 : 50,000

FRAGILE EARTH  
Session T8E  
Munich, 05.09.2011

## Further Case Studies

- **Soil Creeping, Formation of Erosion Gullies:** Freital / Germany (2009)
- **Extensive Soil Erosion:** Weißeritz Catchment (2008)
- **Erosion Gullies:** Limpopo Area / South Africa (2009)
- **Coal Fires:** China (TUBAF, 2010)
- **Manganese Nodules Coverage Density:** Clarion-Clipperton Zone / Pacific Ocean (BGR, 2010)
- **Mineral Deposits / Occurrences - Pb/Zn, Au, Cr:** Kosovo (ICMM, 2003 – 2009)
- **Mineral Deposits / Occurrence – Au:** Ghana (GSD, 2008)
- **Regolith Classification:** Burkina Faso (Universite Toulouse, 2010)
- **Soil Contaminations in Urban Areas:** Marienberg / Germany (LfULG, 2010)
- **Spread of Forest Pests:** Tharandter Wald / Germany (Sachsenforst, 2009)
- **Soil Geochemistry:** Brasil (TUBAF, 2011)
- **Mineral Deposits / Occurrences – Sn, W:** Erzgebirge (TUBAF, 2011)

FRAGILE EARTH  
Session T8E  
Munich, 05.09.2011

## Summary: Application of Artificial Neural Networks

- Multiple applications of the developed methodology using artificial neural networks and GIS for the **prediction of geo-hazard**
  - **Currently in development:**
    - Soil Parameter Regionalisation Model
    - Mineral Deposit Prediction Model
    - ArcGIS 10 Support
- We look forward to your questions, suggestions and comments and hope for future knowledge sharing and collaboration!

Geospatial Prediction Using  
Artificial Intelligence and GIS

## News

05 May 2011, 17<sup>th</sup> BEAK Symposium -  
We inform about management and  
accessibility of geoscientific 2D and 3D  
data and the modeling of geological

**advangeo® prediction software** lets you dig deeper into your data and make more value of  
it by using artificial neural networks and GIS for the prediction of spatial events and phenomena like  
probability of geo-hazards or location of mineral deposits! When do you advangeo?
